## THYROID/NECK ULTRASOUND

**HISTORY:** Thyroglossal cyst diagnosed in 2023.

No prior studies available for comparison.

Right lobe of the thyroid appears normal. It measures 3.7 x 1.3 x 1.4 cm Vol. 3.52 cc.

Left lobe of the thyroid appears normal. It measures 3.7 x 1.3 x 1.4 cm Vol. 3.52 cc.

There is a hypoechoic mass seen midline measuring 3.9 x 2.1 x 3.1 cm. Flow is demonstrated within. In view of the fact that it is solid appearing, we are not looking at a thyroglossal duct cyst.

Isthmus appears normal. It measures 0.4 cm.

Right and left side of the neck was scanned and no adenopathy noted.

Right and left submandibular and parotid glands appear normal.

**IMPRESSION:** There is a hypoechoic mass seen midline. Flow is demonstrated within. In view of the fact that it is solid appearing, we are not looking at a thyroglossal duct cyst. Correlation with prior studies is recommended. If these are not available, CT should be obtained.

**NOTE:** We are now integrated into the Neodin Champlain LHIN repository, hospital image sharing is now available. To learn more and to have access to your patients images please visit our website at <https://cdncale.ca/doctorsportal/>.

Thank you for trusting us with your patient's care.

N.B.: Nous sommes maintenant intégrés dans le référentiel du LHIN de Neodin Champlain, le partage d'images hospitalières est disponible. **NUCHAL ULTRASOUND**

The area of concern was scanned and demonstrates a 31 x 18 x 26 mm solid hypoechoic smoothly marginated nodule. This is sonographically consistent with a thyroglossal duct remnant however further diagnostic work up is suggested to rule out more significant pathology.
