Thank you for seeing this 43 yr old regarding sl elevation of DHEAS (13.5) and testosterone 2.4). Her menses are regular and the follicle count was < 10. She has tried 2 rounds of IVF unsuccessfully. She was given DHEA supplements for fertility but has stopped. She was wondering if this was a N variant/is this contributing to her infertility (besides her age). This was also investigated partly d/t female pattern hair loss
